## **Computer and Machine Vision: Theory, Algorithms, Practicalities** E. R. Davies

Computer and Machine Vision: Theory, Algorithms, Practicalities (previously entitled Machine Vision) clearly and systematically presents the basic methodology of computer and machine vision, covering the essential elements of the theory while emphasizing algorithmic and practical design constraints. This fully revised fourth edition has brought in more of the concepts and applications of computer vision, making it a very comprehensive and up-to-date tutorial text suitable for graduate students, researchers and R&D engineers working in this vibrant subject.

Key features include:

- Practical examples and case studies give the ‘ins and outs’ of developing real-world vision systems, giving engineers the realities of implementing the principles in practice.
- New chapters containing case studies on surveillance and driver assistance systems give practical methods on these cutting-edge applications in computer vision.
- Necessary mathematics and essential theory are made approachable by careful explanations and well-illustrated examples.
- Updated content and new sections cover topics such as human iris location, image stitching, line detection using RANSAC, performance measures, and hyperspectral imaging.
- The ‘recent developments’ section now included in each chapter will be useful in bringing students and practitioners up to date with the subject.

Roy Davies is Emeritus Professor of Machine Vision at Royal Holloway, University of London. He has worked on many aspects of vision, from feature detection to robust, real-time implementations of practical vision tasks. His interests include automated visual inspection, surveillance, vehicle guidance and crime detection. He has published more than 200 papers, and three books – Machine Vision: Theory, Algorithms, Practicalities (1990), Electronics, Noise and Signal Recovery (1993), and Image Processing for the Food Industry (2000); the first of these has been widely used internationally for more than 20 years, and is now out in this much enhanced fourth edition. Roy holds a DSc at the University of London, and has been awarded Distinguished Fellow of the British Machine Vision Association, and Fellow of the International Association of Pattern Recognition.

- Mathematics and essential theory are made approachable by careful explanations and well-illustrated examples.
- Updated content and new sections cover topics such as human iris location, image stitching, line detection using RANSAC, performance measures, and hyperspectral imaging.
- The ‘recent developments’ section now included in each chapter will be useful in bringing students and practitioners up to date with the subject.

### **From reader reviews:**

#### **Walter Chacon:**

Why don't make it to become your habit? Right now, try to prepare your time to do the important act, like looking for your favorite publication and reading a reserve. Beside you can solve your trouble; you can add your knowledge by the book entitled Computer and Machine Vision: Theory, Algorithms, Practicalities. Try to make book Computer and Machine Vision: Theory, Algorithms, Practicalities as your buddy. It means that it can for being your friend when you truly feel alone and beside associated with course make you smarter than ever before. Yeah, it is very fortunated for yourself. The book makes you much more confidence because you can know every little thing by the book. So , let's make new experience and also knowledge with this book.

#### **Rachel Robbins:**

Do you have something that you prefer such as book? The e-book lovers usually prefer to select book like comic, limited story and the biggest an example may be novel. Now, why not attempting Computer and Machine Vision: Theory, Algorithms, Practicalities that give your pleasure preference will be satisfied by means of reading this book. Reading habit all over the world can be said as the way for people to know world far better then how they react toward the world. It can't be explained constantly that reading behavior only for the geeky individual but for all of you who wants to always be success person. So , for every you who want to start examining as your good habit, you can pick Computer and Machine Vision: Theory, Algorithms, Practicalities become your own starter.

#### **Margaretta Lee:**

Is it you who having spare time after that spend it whole day simply by watching television programs or just lying down on the bed? Do you need something totally new? This Computer and Machine Vision: Theory, Algorithms, Practicalities can be the response, oh how comes? It's a book you know. You are therefore out of date, spending your extra time by reading in this brand new era is common not a geek activity. So what these publications have than the others?

#### **Philip Newman:**

You may get this Computer and Machine Vision: Theory, Algorithms, Practicalities by check out the bookstore or Mall. Just simply viewing or reviewing it can to be your solve difficulty if you get difficulties on your knowledge. Kinds of this book are various. Not only simply by written or printed but also can you enjoy this book by e-book. In the modern era like now, you just looking because of your mobile phone and searching what your problem. Right now, choose your own personal ways to get more information about your book. It is most important to arrange you to ultimately make your knowledge are still upgrade. Let's try to choose suitable ways for you.
