Synthesis of Carbon-Phosphorus Bonds, Second Edition is a working guide for the laboratory, incorporating classical approaches with the recent developments of carbon-phosphorus (C-P) bond formation. These advances include the preparation of phosphoranes - specifically in the use of transient oxophosphoranes as intermediates in organophosphorus compound syntheses ñ along with the new approaches towards the preparation of compounds with aromatic and vinylic C-P bonds. Detailed surveys of IUPAC nomenclature recommendations, common notation systems, and various experimental examples help to make the book an effective source of critical and annotated references for organic and phosphorus chemists specifically, or for any chemists working with C-P bonds.
