The Upright Ape: A New Origin of the Species Aaron G. Filler

Did apes evolve from humans?

Sudden abrupt changes in which entirely new types of organisms come into existence almost instantaneously do not fit the model of Modern

Evolutionary Theory and the Darwinian model. In this remarkable 288 page book written by Harvard trained evolutionary biologist Aaron Filler, MD, Ph.D.--a student of Stephen Jay Gould and Ernst Mayr--we learn how modern biological evidence finally proves that sudden non-Darwinian evolution has played a major role in a number of major events in the history of life including the origin of humans.

Based on this updated biological information, Dr. Filler re-examines the latest fossil evidence to reveal that the human body form is far more ancient than has been widely accepted--emerging abruptly, apparently due to a Pax gene change--at the time of Morotopithecus 21.6 million years ago. As a consequence, Filler argues, there is now compelling evidence that apes descended from humans and not the other way around.
