Neoplastic mimics or "pseudotumors" can simulate neoplasms on all levels of analysis- clinical, radiologic, and pathologic--and thus represent particular diagnostic pitfalls for the pathologist that can ultimately lead to therapeutic misdirection.

This book provides the pathologist with detailed morphologic descriptions and diagnostic guidance in recognizing these neoplastic mimics as they occur in the genitourinary system. In addition, descriptions and diagnostic guidance are provided for the range of genitourinary lesions tumors that may mimic benign masses but are in fact neoplastic. Throughout the book comparisons of neoplastic mimics with true neoplasms are provided, at clinical, gross, and histologic levels. In the presentation of every entity, the points that contribute to differential diagnosis are emphasized.
