Toward Precision Medicine: Building a Knowledge Network for Biomedical Research and a New Taxonomy of Disease Committee on a Framework for Development a New Taxonomy of Disease, Board on Life Sciences, Division on Earth and Life Studies, National Research Council

Motivated by the explosion of molecular data on humans-particularly data associated with individual patients-and the sense that there are large, as-yet-untapped opportunities to use this data to improve health outcomes, *Toward Precision Medicine* explores the feasibility and need for "a new taxonomy of human disease based on molecular biology" and develops a potential framework for creating one.

The book says that a new data network that integrates emerging research on the molecular makeup of diseases with clinical data on individual patients could drive the development of a more accurate classification of diseases and ultimately enhance diagnosis and treatment. The "new taxonomy" that emerges would define diseases by their underlying molecular causes and other factors in addition to their traditional physical signs and symptoms. The book adds that the new data network could also improve biomedical research by enabling scientists to access patients' information during treatment while still protecting their rights. This would allow the marriage of molecular research and clinical data at the point of care, as opposed to research information continuing to reside primarily in academia.

Toward Precision Medicine notes that moving toward individualized medicine requires that researchers and health care providers have access to very large sets of health- and disease-related data linked to individual patients. These data are also critical for developing the information commons, the knowledge network of disease, and ultimately the new taxonomy.

From reader reviews:

Margert Lewis:

What do you concentrate on book? It is just for students because they are still students or the item for all people in the world, exactly what the best subject for that? Just simply you can be answered for that concern above. Every person has distinct personality and hobby per other. Don't to be forced someone or something that they don't desire do that. You must know how great and important the book Toward Precision Medicine: Building a Knowledge Network for Biomedical Research and a New Taxonomy of Disease. All type of book could you see on many sources. You can look for the internet solutions or other social media.

Dorothy Whisler:

Book is to be different for each grade. Book for children until eventually adult are different content. As it is known to us that book is very important for us. The book Toward Precision Medicine: Building a Knowledge Network for Biomedical Research and a New Taxonomy of Disease had been making you to know about other expertise and of course you can take more information. It is extremely advantages for you. The book Toward Precision Medicine: Building a Knowledge Network for Biomedical Research and a New Taxonomy of Disease is not only giving you more new information but also being your friend when you feel bored. You can spend your spend time to read your e-book. Try to make relationship using the book Toward Precision Medicine: Building a Knowledge Network for Biomedical Research and a New Taxonomy of Disease. You never feel lose out for everything if you read some books.

Kathleen Knight:

This book untitled Toward Precision Medicine: Building a Knowledge Network for Biomedical Research and a New Taxonomy of Disease to be one of several books this best seller in this year, honestly, that is because when you read this reserve you can get a lot of benefit in it. You will easily to buy that book in the book shop or you can order it by using online. The publisher of this book sells the e-book too. It makes you more easily to read this book, since you can read this book in your Mobile phone. So there is no reason to you personally to past this reserve from your list.

James Hibner:

You may spend your free time to read this book this reserve. This Toward Precision Medicine: Building a Knowledge Network for Biomedical Research and a New Taxonomy of Disease is simple to develop you can read it in the playground, in the beach, train as well as soon. If you did not get much space to bring typically the printed book, you can buy typically the e-book. It is make you easier to read it. You can save the book in your smart phone. Thus there are a lot of benefits that you will get when you buy this book.
