**The Large Dam Dilemma: An Exploration of the Impacts of Hydro Projects on People and the Environment in China (Springer Briefs in Environmental Science)** Pu Wang, Shikui Dong, James P. Lassoie

Large dam construction has significant environmental and social impacts at different scales. As the largest developing country in the world, China has built about half of the world's large dams, and more are expected to be built over the next two decades to meet the country's rapidly growing demand for energy. This book summarizes and updates information about the history, distribution, functions, and impacts of large dams, both globally and at China's national level. It then addresses the environmental and social-economic impacts of large dams in China with particular emphasis on the impacts of large dams on relocated people and associated compensation policies. Lastly, it introduces an integrated ecological and socio-economic study conducted in areas affected by dams along the Upper Mekong River, China. This book has the following three goals.

The first goal is to summarize and update information on large dams globally and at China's national level (Ch. 2). We examine large dam problems from different perspectives, ranging from their spatial and temporal distributions and their environmental and social impacts, to discussions and debates centered on them. We also incorporate the results of an empirical investigation of the environmental and socio-economic impacts of large dams on the Upper Mekong River, China, and draw conclusions out of the analysis (Chs.3 & 4).

Our second goal is to provide an analysis framework to help understand the environmental and social-economic impacts of dam construction and the resulting environmental degradations and social inequities at different scales (Chs.3 & 4), as well as to offer recommendations for mitigating these impacts within China's socio-political context (Ch. 5). The significant environmental effects resulting from dam construction include damage to ecological integrity and loss of biological diversity. The most significant social consequences brought by dam projects are their negative impacts on relocated people. Our analysis framework provides approaches to help comprehensively understand these impacts.

Our third goal is to provide clues and suggestions for further studies of large dam problems both globally and in China (Ch. 5). The construction of large dams is proceeding rapidly in different parts of the world despite the heated debates on whether they should be built at all. The decision-making process related to building large dams involves considerations of economic viability, environmental sustainability, and social equity. Therefore, interdisciplinary collaborations are required in large dam research and development projects in order to reconcile the interests of different stakeholders and avoid harming ecosystems, biodiversity, and human welfare. Overall, we hope our book facilitates future examinations of large dams by providing summaries of existing data and research related to large dams, and offering a framework for better understanding and analyzing their environmental and social impacts.

**From reader reviews:**

**Teresa Ealy:**

Do you have favorite book? For those who have, what is your favorite's book? Reserve is very important thing for us to learn everything in the world. Each book has different aim as well as goal; it means that reserve has different type. Some people truly feel enjoy to spend their time to read a book. These are reading whatever they have because their hobby is reading a book. What about the person who don't like examining a book? Sometime, man feel need book once they found difficult problem or even exercise. Well, probably you will need this The Large Dam Dilemma: An Exploration of the Impacts of Hydro Projects on People and the Environment in China (Springer Briefs in Environmental Science).

**Agnes Figueroa:**

The book untitled The Large Dam Dilemma: An Exploration of the Impacts of Hydro Projects on People and the Environment in China (Springer Briefs in Environmental Science) is the reserve that recommended to you to see. You can see the quality of the book content that will be shown to you. The language that writer use to explained their ideas are easily to understand. The article writer was did a lot of study when write the book, therefore the information that they share for your requirements is absolutely accurate. You also could possibly get the e-book of The Large Dam Dilemma: An Exploration of the Impacts of Hydro Projects on People and the Environment in China (Springer Briefs in Environmental Science) from the publisher to make you far more enjoy free time.

**Dennis Jenkins:**

The Large Dam Dilemma: An Exploration of the Impacts of Hydro Projects on People and the Environment in China (Springer Briefs in Environmental Science) can be one of your beginner books that are good idea. Most of us recommend that straight away because this e-book has good vocabulary that could increase your knowledge in language, easy to understand, bit entertaining but nonetheless delivering the information. The writer giving his/her effort that will put every word into delight arrangement in writing The Large Dam Dilemma: An Exploration of the Impacts of Hydro Projects on People and the Environment in China (Springer Briefs in Environmental Science) however doesn't forget the main place, giving the reader the hottest as well as based confirm resource information that maybe you can be one among it. This great information could drawn you into fresh stage of crucial thinking.

**Karen Lambert:**

This The Large Dam Dilemma: An Exploration of the Impacts of Hydro Projects on People and the Environment in China (Springer Briefs in Environmental Science) is great guide for you because the content and that is full of information for you who have always deal with world and possess to make decision every minute. This specific book reveal it info accurately using great coordinate word or we can claim no rambling

sentences in it. So if you are read the item hurriedly you can have whole details in it. Doesn't mean it only will give you straight forward sentences but difficult core information with wonderful delivering sentences. Having The Large Dam Dilemma: An Exploration of the Impacts of Hydro Projects on People and the Environment in China (Springer Briefs in Environmental Science) in your hand like obtaining the world in your arm, details in it is not ridiculous a single. We can say that no e-book that offer you world throughout ten or fifteen moment right but this reserve already do that. So , this is certainly good reading book. Hello Mr. and Mrs. busy do you still doubt in which?
