Color for the Sciences (MIT Press) Jan J. Koenderink

Color for the Sciences is the first book on colorimetry to offer an account that emphasizes conceptual and formal issues rather than applications. Jan Koenderink's introductory text treats colorimetry -- literally, "color measurement" -- as a science, freeing the topic from the usual fixation on conventional praxis and how to get the "right" result. Readers of *Color for the Sciences* will learn to rethink concepts from the roots in order to reach a broader, conceptual understanding. After a brief account of the history of the discipline (beginning with Isaac Newton) and a chapter titled "Colorimetry for Dummies," the heart of the book covers the main topics in colorimetry, including the space of beams, achromatic beams, edge colors, optimum colors, color atlases, and spectra. Other chapters cover more specialized topics, including implementations, metrics pioneered by Schrödinger and Helmholtz, and extended color space. *Color for the Sciences* can be used as a reference for professionals or in a formal introductory course on colorimetry. It will be especially useful both for those working with color in a scientific or engineering context who find the standard texts lacking and for professionals and students in image engineering, computer graphics, and computer science. Each chapter ends with exercises, many of which are open-ended, suggesting ways to explore the topic further, and can be developed into research projects. The text and notes contain numerous suggestions for demonstration experiments and individual explorations. The book is self-contained, with formal methods explained in appendixes when necessary.

From reader reviews:

Susan Swain:

Book is usually written, printed, or created for everything. You can learn everything you want by a e-book. Book has a different type. As you may know that book is important matter to bring us around the world. Beside that you can your reading ability was fluently. A e-book Color for the Sciences (MIT Press) will make you to become smarter. You can feel much more confidence if you can know about anything. But some of you think in which open or reading some sort of book make you bored. It's not make you fun. Why they could be thought like that? Have you seeking best book or ideal book with you?

Bill Boyd:

Is it an individual who having spare time after that spend it whole day through watching television programs or just laying on the bed? Do you need something totally new? This Color for the Sciences (MIT Press) can be the reply, oh how comes? The new book you know. You are and so out of date, spending your free time by reading in this brand-new era is common not a geek activity. So what these books have than the others?

Michelle Han:

As a student exactly feel bored to reading. If their teacher inquired them to go to the library or to make summary for some e-book, they are complained. Just little students that has reading's heart or real their pastime. They just do what the instructor want, like asked to the library. They go to at this time there but nothing reading critically. Any students feel that examining is not important, boring along with can't see colorful photos on there. Yeah, it is being complicated. Book is very important in your case. As we know that on this age, many ways to get whatever you want. Likewise word says, many ways to reach Chinese's country. Therefore this Color for the Sciences (MIT Press) can make you feel more interested to read.

David McMillian:

Many people said that they feel uninterested when they reading a publication. They are directly felt the idea when they get a half areas of the book. You can choose often the book Color for the Sciences (MIT Press) to make your personal reading is interesting. Your skill of reading talent is developing when you including reading. Try to choose simple book to make you enjoy to study it and mingle the opinion about book and looking at especially. It is to be first opinion for you to like to open up a book and learn it. Beside that the reserve Color for the Sciences (MIT Press) can to be your new friend when you're experience alone and confuse with the information must you're doing of that time.
