Hyperspectral Remote Sensing of Tropical and Sub-Tropical Forests

Hyperspectral Remote Sensing of Tropical and Sub-Tropical Forests

While frequently used in temperate environments, hyperspectral sensors and data are still a novelty in the tropics. Exploring the potential of hyperspectral remote sensing for assessing ecosystem characteristics, **Hyperspectral Remote Sensing of Tropical and Sub-Tropical Forests** focuses on the complex and unique set of challenges involved in using this technology and the data it provides.

Special Features

- A CD-ROM including hyperspectral color images
- Coverage of *in situ* spectroscopy, airborne and satellite-based remote sensing, and fusion with other forms of data such as LiDAR
- Peer-reviewed chapters that highlight the most innovative achievements
- Discussion of the potential of hyperspectral remote sensing to provide tools for assessing ecosystem characteristics at various spatial and temporal scales

Experts from Diverse Backgrounds Share Their Successes

The book explores a range of analysis techniques, including hyperspectral reflectance indices, spectral mixture analysis, pattern classification, band selection, partial least-squares, linear discriminant analysis, and radiative transfer models. The chapter authors present a comprehensive review of the current status and innovative achievements in the field, citing approximately six hundred studies. As illustrated by the diverse backgrounds of the contributors, the most successful use of hyperspectral data requires a multidisciplinary approach spanning a wide range of fields.

Go Beyond the Basics to Actual Application

Although it begins by touching on the basics, this book is not a tutorial in remote sensing, but a reference that illustrates the potential applications and analysis techniques that can be used when facing the unique challenge of working in the tropics. It presents real-world examples and a suite of analysis techniques for using hyperspectral remote sensing in complex and diverse regions.

From reader reviews:

Luis Acosta:

The book Hyperspectral Remote Sensing of Tropical and Sub-Tropical Forests gives you the sense of being enjoy for your spare time. You should use to make your capable far more increase. Book can to get your best friend when you getting tension or having big problem with the subject. If you can make looking at a book Hyperspectral Remote Sensing of Tropical and Sub-Tropical Forests to be your habit, you can get a lot more advantages, like add your own capable, increase your knowledge about a few or all subjects. You can know everything if you like wide open and read a reserve Hyperspectral Remote Sensing of Tropical and Sub-Tropical Forests. Kinds of book are a lot of. It means that, science book or encyclopedia or other folks. So , how do you think about this guide?

Anne Stewart:

Do you have something that you enjoy such as book? The publication lovers usually prefer to opt for book like comic, brief story and the biggest the first is novel. Now, why not hoping Hyperspectral Remote Sensing of Tropical and Sub-Tropical Forests that give your fun preference will be satisfied by means of reading this book. Reading behavior all over the world can be said as the method for people to know world considerably better then how they react when it comes to the world. It can't be explained constantly that reading addiction only for the geeky individual but for all of you who wants to possibly be success person. So , for all of you who want to start reading as your good habit, it is possible to pick Hyperspectral Remote Sensing of Tropical and Sub-Tropical Forests become your own starter.

Sharon Bedgood:

Reading a book to become new life style in this 12 months; every people loves to learn a book. When you examine a book you can get a lots of benefit. When you read ebooks, you can improve your knowledge, mainly because book has a lot of information on it. The information that you will get depend on what types of book that you have read. In order to get information about your study, you can read education books, but if you want to entertain yourself you can read a fiction books, these us novel, comics, in addition to soon. The Hyperspectral Remote Sensing of Tropical and Sub-Tropical Forests will give you new experience in reading a book.

Linda Bryant:

In this era which is the greater man or woman or who has ability in doing something more are more valuable than other. Do you want to become one among it? It is just simple method to have that. What you have to do is just spending your time almost no but quite enough to enjoy a look at some books. Among the books in the top record in your reading list is usually Hyperspectral Remote Sensing of Tropical and Sub-Tropical Forests. This book that is qualified as The Hungry Slopes can get you closer in turning out to be precious person. By looking way up and review this guide you can get many advantages.
