Language and Speech Processing

Language and Speech Processing

This comprehensive examination of speech processing addresses the technological aspects of speech production and perception systems, as well as the science behind the technology. The primary concepts include speech analysis, the storing and transmitting of speech via variable rate coding, the synthesis of speech from text sources, and speech recognition, including speaker and language identification plus spoken language understanding. The explication of these processes includes the state-of-the-art methods utilized in signal processing, pattern recognition, stochastic modelling and computational linguistics, and human factor studies.
