Mathematical and Statistical Estimation Approaches in Epidemiology

Mathematical and Statistical Estimation Approaches in Epidemiology

Mathematical and Statistical Estimation Approaches in Epidemiology compiles theoretical and practical contributions of experts in the analysis of infectious disease epidemics in a single volume. Recent collections have focused in the analyses and simulation of deterministic and stochastic models whose aim is to identify and rank epidemiological and social mechanisms responsible for disease transmission. The contributions in this volume focus on the connections between models and disease data with emphasis on the application of mathematical and statistical approaches that quantify model and data uncertainty. The book is aimed at public health experts, applied mathematicians and scientists in the life and social sciences, particularly graduate or advanced undergraduate students, who are interested not only in building and connecting models to data but also in applying and developing methods that quantify uncertainty in the context of infectious diseases. Chowell and Brauer open this volume with an overview of the classical disease transmission models of Kermack-McKendrick including extensions that account for increased levels of epidemiological heterogeneity. Their theoretical tour is followed by the introduction of a simple methodology for the estimation of, the basic reproduction number, R_0 . The use of this methodology is illustrated, using regional data for 1918–1919 and 1968 in uenza pandemics.

From reader reviews:

Harold Walsh:

Book is to be different for each and every grade. Book for children right up until adult are different content. We all know that that book is very important for us. The book Mathematical and Statistical Estimation Approaches in Epidemiology had been making you to know about other understanding and of course you can take more information. It is quite advantages for you. The publication Mathematical and Statistical Estimation Approaches in Epidemiology is not only giving you a lot more new information but also being your friend when you sense bored. You can spend your spend time to read your book. Try to make relationship while using book Mathematical and Statistical Estimation Approaches in Epidemiology. You never feel lose out for everything should you read some books.

Nicholas Tapia:

As people who live in the modest era should be revise about what going on or data even knowledge to make these individuals keep up with the era that is always change and move ahead. Some of you maybe may update themselves by examining books. It is a good choice for you personally but the problems coming to you actually is you don't know what kind you should start with. This Mathematical and Statistical Estimation Approaches in Epidemiology is our recommendation to make you keep up with the world. Why, because book serves what you want and wish in this era.

Joseph Chitwood:

Spent a free time and energy to be fun activity to accomplish! A lot of people spent their leisure time with their family, or their very own friends. Usually they doing activity like watching television, about to beach, or picnic inside park. They actually doing same every week. Do you feel it? Would you like to something different to fill your own free time/ holiday? Could be reading a book could be option to fill your totally free time/ holiday. The first thing that you'll ask may be what kinds of e-book that you should read. If you want to test look for book, may be the publication untitled Mathematical and Statistical Estimation Approaches in Epidemiology can be great book to read. May be it could be best activity to you.

Theodore Rivas:

Do you have something that you prefer such as book? The publication lovers usually prefer to decide on book like comic, limited story and the biggest some may be novel. Now, why not attempting Mathematical and Statistical Estimation Approaches in Epidemiology that give your enjoyment preference will be satisfied simply by reading this book. Reading addiction all over the world can be said as the method for people to know world a great deal better then how they react toward the world. It can't be mentioned constantly that reading practice only for the geeky person but for all of you who wants to always be success person. So , for all you who want to start looking at as your good habit, you could pick Mathematical and Statistical Estimation Approaches in Epidemiology become your starter.
